

My Chiropractic Experience

Since beginning care, now when I run during a basketball game I haven't used my inhaler once since starting care.

The reason I began chiropractic care was because after my mom came here, I found out that my asthma could be caused by a problem with my back. At its worst, my asthma really hurt me a lot. I play basketball and after each time that I ran I would have to use my inhaler. I didn't have any previous experience with chiropractors. Prior to coming to the office, I used an inhaler and took Albuterol. It helped temporarily but not for a long period of time.

Since beginning care, now when I run during a basketball game I haven't used my inhaler once since starting care. My sinuses have been feeling better and I haven't been getting sick like normal.

I was referred to the office by my mother. The office is great and I love coming here.
