

My Chiropractic Experience

“We began chiropractic care four years ago”

We are the Woods family and we began chiropractic care four years ago. Karen began for back and sinus pain, and Ron and the kids began for wellness care. When we came in we thought we were healthy until we saw our exam and x-ray results. We found the office through friends of ours that came here with their family. Since beginning care, Karen’s sinuses are about 90% better. I don’t have to take medication for them anymore. My back doesn’t hurt in the morning anymore. I have also had a few incidents were I injured myself and I was able to get in right away for an adjustment. After getting some extra adjustments, my body was able to heal and I was no longer in pain. Ron used to have kidney stones at least once a year, and now he no longer has them. It has been about 2 yrs since his last kidney stone attack, and he feels that it is because his body is now healing. Ron says that the knowledge that he has received from the doctors about health and wellness as a lifestyle has completely changed the way he thinks about health. Ronny our son had chronic sore throats to the point that we considered having his tonsils removed. Since beginning care he has had less sore throats and they were not as severe as they used to be. He even went a full year without one. We have decided not have the tonsils removed and our kids no longer need antibiotics. We have noticed that Haley has not been sick very often and she has recovered quickly from the few things she has had. We have stayed committed to our care because we want to take care of ourselves so we can be around for our kids and our grandkids. We want to stay healthy and well. The education we receive here makes us feel like we have an advantage over others. We love that the office is like family. Our children are very comfortable here as well. We would tell a new patient to be ready for the commitment. It is harder in the beginning but it is worth the time and the commitment. You need to be ready to change your way of thinking.
